

AI/ROBOTICS

Using the right algorithms within a beauty app will ensure a more functional approach towards product purchases. By knowing a consumer's exact needs based on the skin type, preferences, and goals, AI and ML can help brands provide personalized routines and products to each consumer.

AI can call on a huge range of methods to provide suggestions and personalize the users' experience. The technology can connect multiple metrics, products, and ingredients to support both product lines and the customer's skin care needs.

Our rapid AI app and prototype development tool, dais, allows us to deliver results quickly to users' fingertips. Our services offer several benefits, including automation, smart decision making, enhanced customer experience, medical advances, research and data analysis, solving complex problems, business continuity, managing repetitive tasks, minimizing errors, and increasing business efficiency. Our focus on automation and smart decision-making aims to reduce manual intervention, minimize errors, and increase efficiency in business processes. By enhancing customer experience, we help businesses build stronger relationships with their clients, leading to higher retention rates and increased revenue. We also aim to improve medical outcomes through AI-driven analysis, leading to better diagnosis and treatment of diseases.

We possess expertise in a range of tools such as ZAPTEST, JAMS, Eggplant, Kofax, UiPath, Blueprism, Pegasystems, OpenConnect, and more. Our AI consulting teams work towards ambitious business objectives and identify capability gaps to target large value pools. We prioritize initiatives with the highest potential impact and establish benchmarks for companies to assess their data maturity and AI capabilities compared to their peers. We select high-value use cases and launch focused pilots, followed by iterative testing and building. Our approach enables artificial intelligence use cases to go live in as little as six months and have a significant P&L impact within 12 months. We assist data scientists in writing unrestricted code and help organizations build industrial-grade AI solutions.
